Initial Set-up

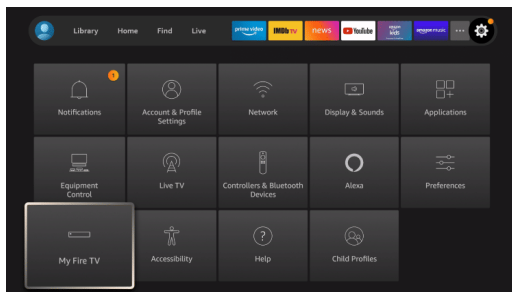

Enabling Unknown Sources

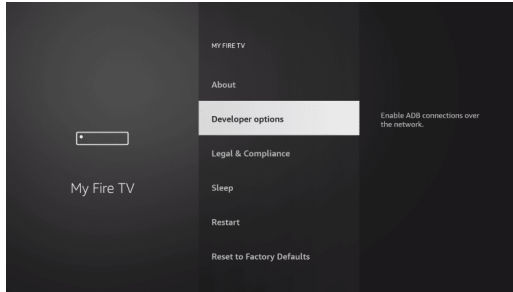

For obvious reasons, our application is not available in the Google Play Store or Amazon Appstore. So we need to *sideload* the apk, in this example using a Firestick 4k.

1. Press 'Home' button on your remote

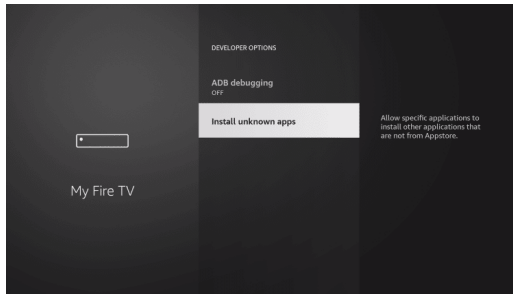

2. Navigate all the way right to Settings > My Fire TV > Developer Options

3. Enable both 'ADB Debugging' and 'Install Unknown Apps'

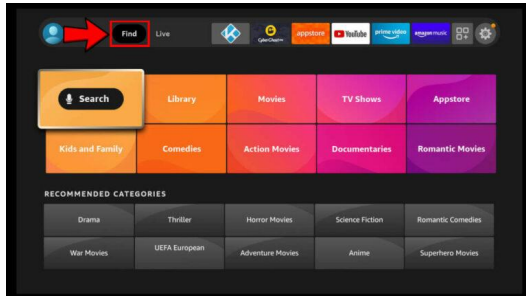

Great. Now your device will allow installation of unknown applications from unknown sources.

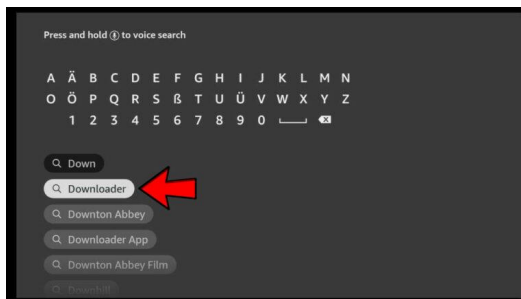

Installing Downloader

We need to install a downloading client. Downloader is both a web browser and a downloader.

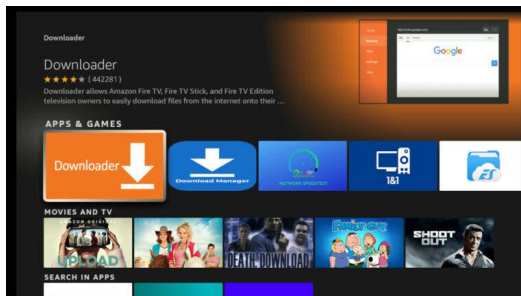

1. Press 'Home' button on your remote
2. Navigate over to 'Search'

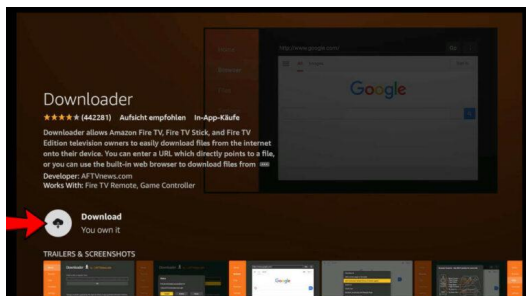

3. Search for Downloader by using the microphone or begin typing 'Down...'

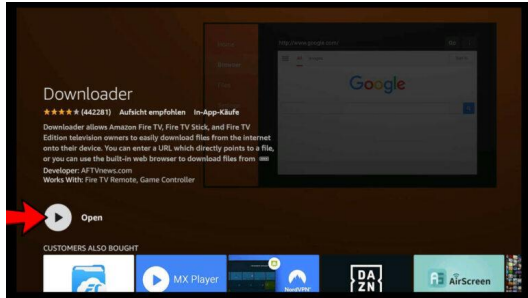

4. Click the first app in the list

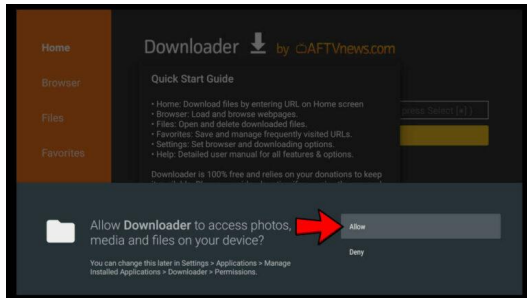

5. Hit download button

6. Wait for download to finish and hit 'Open'

7. Allow the prompt

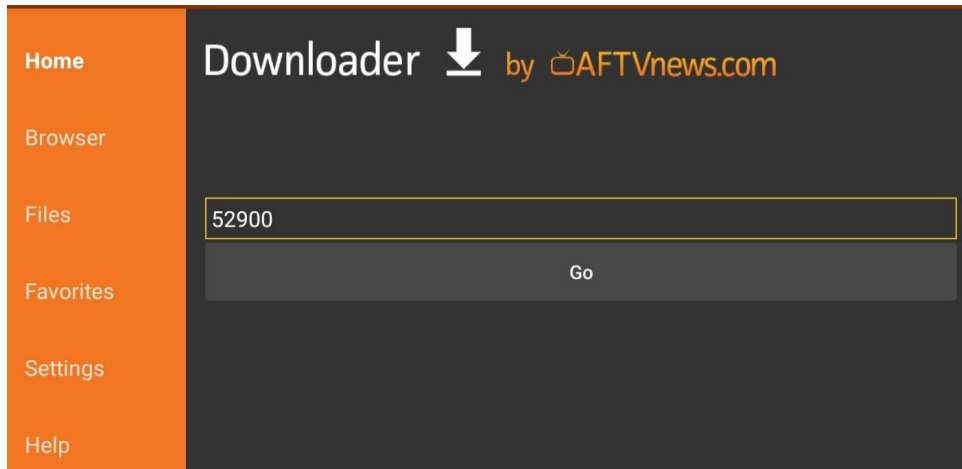

8. Dismiss first popup.

You are now ready to sideload applications.

Sideloaded (Installing Unsupported APKs)

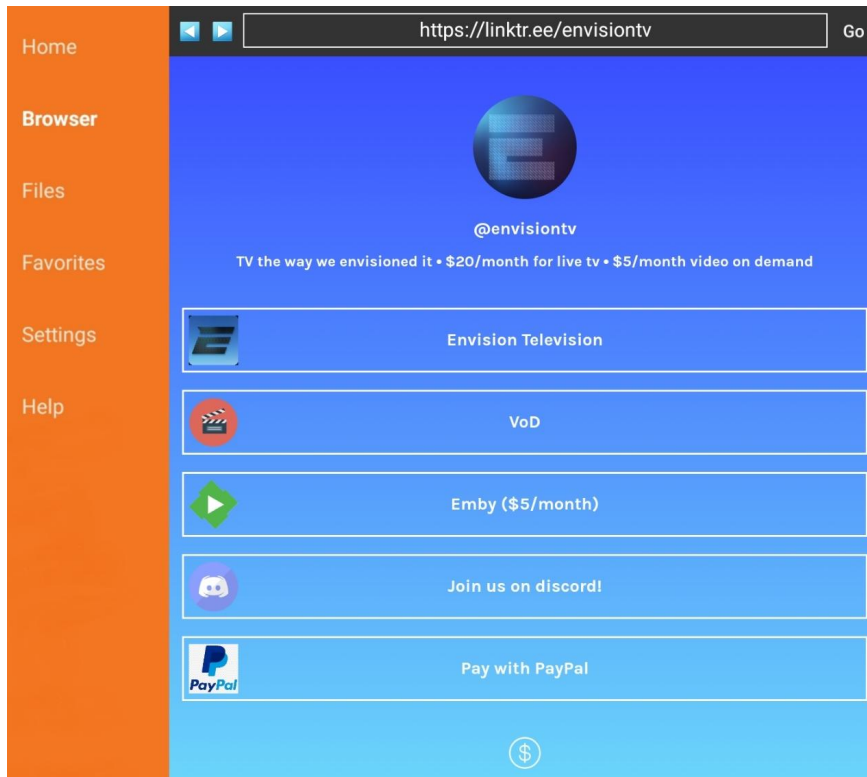

1. Type **52900** into the home tab of Downloader

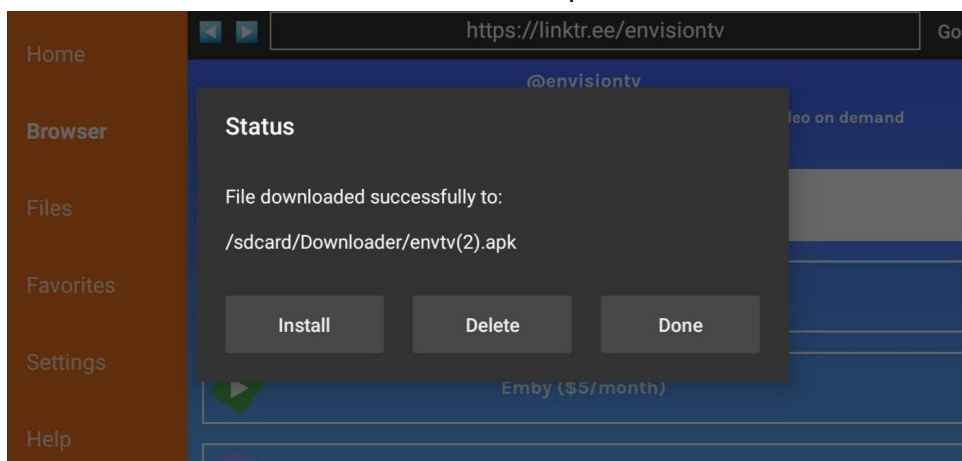

2. Wait 5 seconds to be redirected.

3. Use the directional buttons on your remote to control the cursor. Hover over **Envision Television** to begin the download.

4. Select install, then delete the APK to save space.

You've got your first unofficial application.

Logging into Envision Television

Open it up and log in using your provided credentials.

1. Press 'Login'
2. Name the playlist anything you want (ex. tv)
3. Enter your username and password exactly as given
4. Uncheck 'Include VOD'
5. 'Next'
6. Leave 'Playlist Name' unchanged
7. 'Done'

[Demonstration Video](#) (password: setup)

Emby

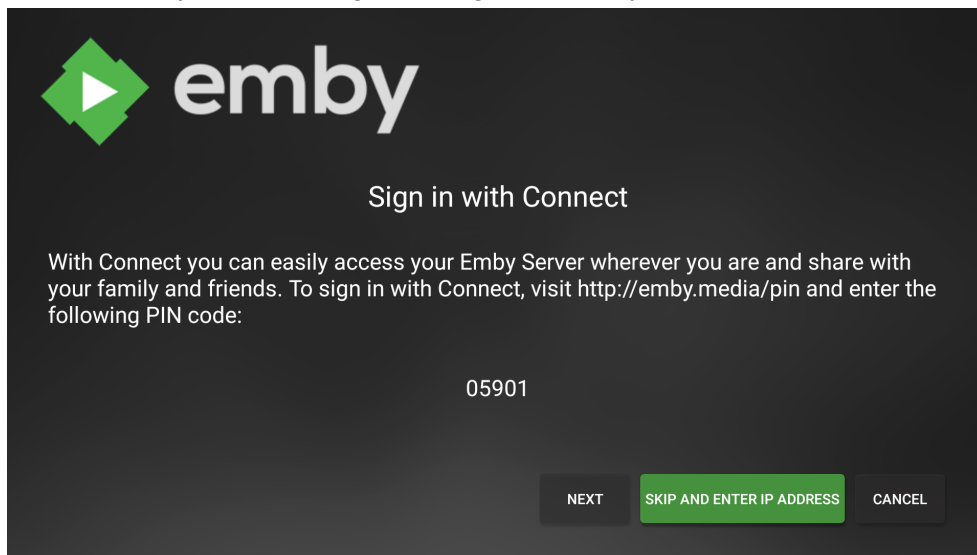

We use dedicated servers to supply video on demand. No more searching for free links only to find poor quality and buffering.

This allows you to cancel all other streaming services you might be already subscribed to. (Netflix, Disney+, Hulu, etc.)

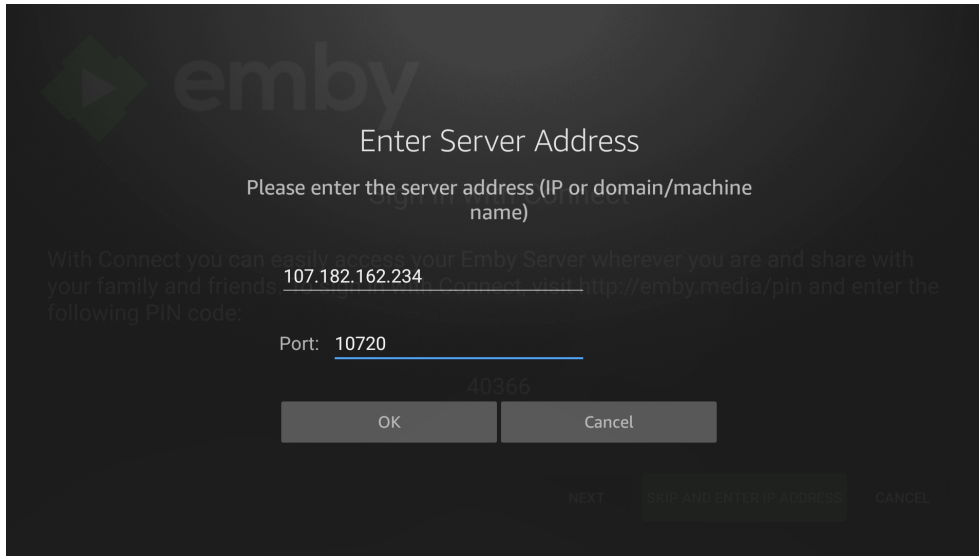

Emby accounts are separate from IPTV, and so is the cost. To access video on demand we charge \$5/month to cover the cost of our servers and our rented library.

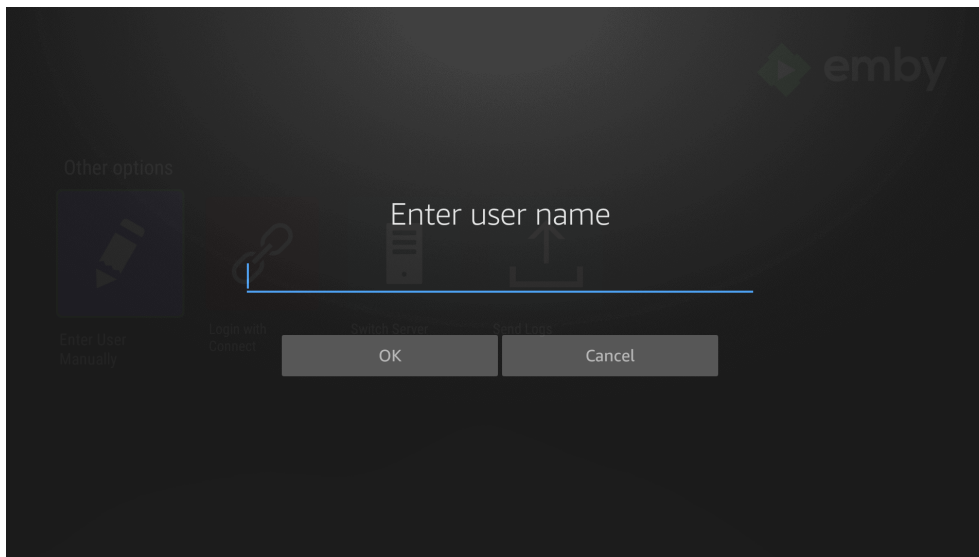

1. Download Emby through Downloader the same as Envision Television, or you can find it in the Appstore by typing it into your device's search function
2. Skip the Emby Connect page and log in manually.

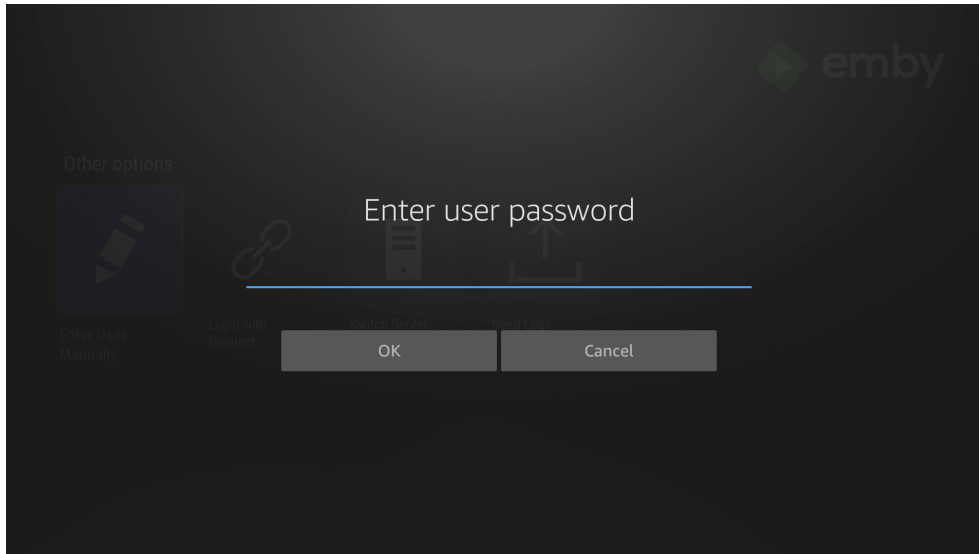

3. Server address: **http://107.182.162.234**
Port: **10720**

4. Enter user manually

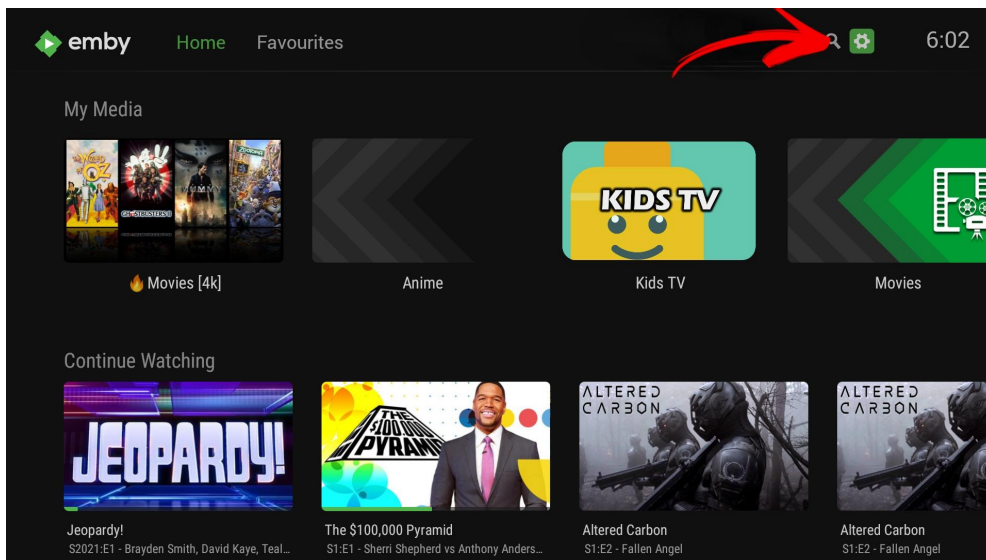

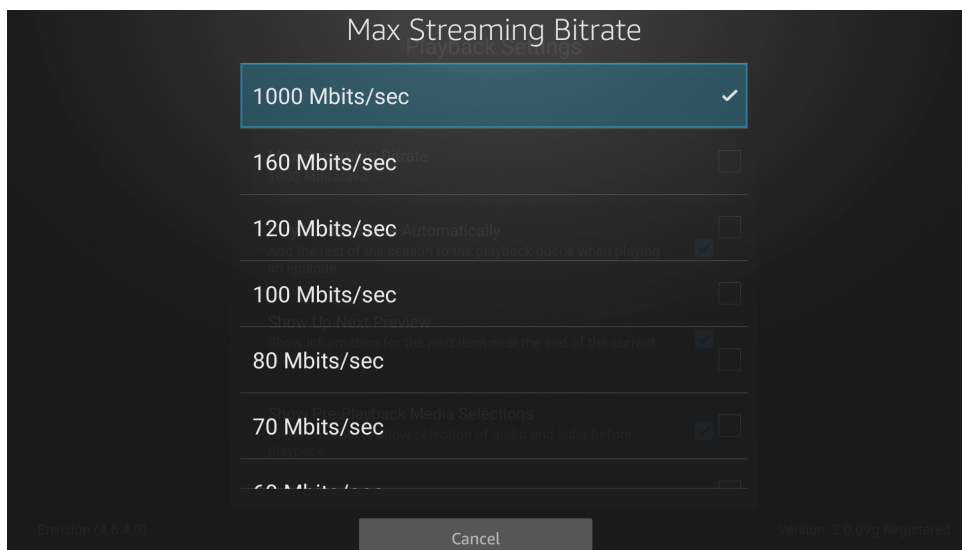

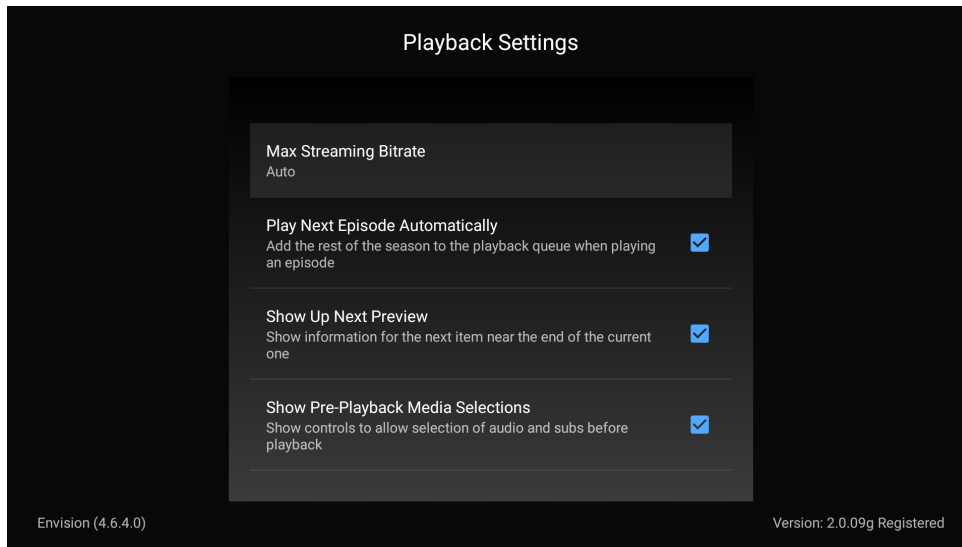

Use your Envision username and password unless instructed otherwise.

**If you don't know your password, feel free to PM me.*

5. Once logged in, users MUST go to Emby's settings and change max streaming bitrate in playback settings to the maximum.

6. It is recommended to sort media by release date when browsing since it is alphabetical by default.

Once you are set up on the server, you can watch from any computer, phone, tablet or other using this direct link:

<https://envisiontv.link/embyweb>

Troubleshooting

Check Announcements beforehand to see if there are any server issues.

Has your subscription expired?

① Reboot router & device

- Pull the plug on your router and streaming device for at least 3 minutes each
- this might sound trivial, but cleaning up wifi traffic and restarting devices solves most non-channel related issues

② Run a speed test

- Open Downloader > Type 52900 in home tab > Scroll down and select Speed Test
- If your speed is below 20mb, try switching to 2.4ghz network. This has better range than your 5ghz. If problems persist, use a VPN or mesh WiFi router system.

③ Clear cache

- Settings > Applications > Envision Television > Storage > Clear Cache

④ Uninstall and reinstall / Update

- Uninstall by going to settings, applications, selecting your app, and uninstall

⑤ Try a VPN

- Install ProtonVPN from Downloader (found in 'More Apps, Freebies 'n' Tools')

Create a free account: <https://account.protonvpn.com/signup/account>

Each account allows for 1 connection at a time. If you have multiple devices, make another account using a disposable email address at <https://temp-mail.org/en/>

Freebies

I do like to include easy access to free applications and tools. I do my best to keep them up to date. Here you can find retro game emulators and a link to a simple ROM database, custom launchers, free movie and tv show applications, and more.

1. As always, Downloader **52900**
2. Still down to 'More Apps, Freebies 'n' Tools'

I recommend installing MX Player, and if you are going to use free movie apps it is important that you use a VPN.

Discord

We use Discord as a private group chat. This allows for announcements, separate channels for chat and important info. If used properly, it should avoid clutter and me having to answer the same questions 120 times on a Sunday afternoon.

Invite your friends, family and coworkers to Discord, not by giving out my phone number.
